(54) Title: PUNCHING TOOL

(57) Abstract: A punching tool has a guided, axially displaceable die plunger 12, which is fixed against relative rotation, in a guide bushing 10. In a bore in its front end a punching die 22 is seated. During the punching stroke the punching die rests against a front face of the die plunger and is axially fixed in place by means of one or several snap-in balls 32, each of which is seated in a transverse bore 30, which snap-in balls are maintained in engagement with an annular groove 34 by means of a spring washer 36 in the die plunger. The outer diameter of the spring washer is only slightly less in the engagement position than the inner diameter of the guide bushing and can be elastically widened for releasing the punching die outside of the guide bushing.

## INTERNATIONAL SEARCH REPORT

International application No.
